leoprotein complex biogenesis
rRNA processing
rRNA metabolic process
glycoprotein metabolic process
c reticulum mannose trimming
protein demannosylation
n alpha−1,2−demannosylation
protein deglycosylation
coprotein biosynthetic process
horin−plexin signaling pathway
response to magnesium ion
stsynaptic membrane potential
transmission of nerve impulse
regulation of appetite
gulation of membrane potential
blood vessel morphogenesis
tive regulation of cell migration
xtracellular matrix organization
acellular structure organization
sulating structure organization
iratory electron transport chain
esis coupled electron transport
esis coupled electron transport
erobic electron transport chain
angiogenesis
positive regulation of synaptic transmission, glutamatergic
regulation of synaptic transmission, glutamatergic
response to magnesi
extracellular matrix organ
extracellular structure organ
respiratory electron transpor
electron transpor
ATP synthesis coupled electron tra
mitochondrial ATP synthesis coupled electron tra
aerobic electron transpor
oxidative phosphor
cellular resp
aerobic resp
glycoprotein metabolic process
c reticulum mannose trimming
protein demannosylation
n alpha−1,2−demannosylation
protein deglycosylation
coprotein biosynthetic process
glycolipid metabolic process
osaccharide metabolic process
o endoplasmic reticulum stress
onoatomic cation homeostasis
cell−cell junction organization
leukocyte migration
gulation of leukocyte migration
blood vessel development
sitive regulation of locomotion
blood vessel morphogenesis
sitive regulation of cell motility
of mononuclear cell migration
collagen metabolic process
tive regulation of cell migration
myeloid leukocyte migration
cell projection morphogenesis
xtracellular matrix organization
acellular structure organization
sulating structure organization
cell projection morphogenesis
ribonucleoprotein complex biogenesis
ribosome biogenesis
rRNA processing
rRNA metabolic process
mitochondrial gene expression
mitochondrial translation
mRNA processing
RNA splicing
RNA splicing, via transesterification reactions
protein−RNA complex organization
organic anion transport
organic acid transport
carboxylic acid transport
epidermis development
ribonucleoprotein complex biog
ribosome biog
rRNA proc
rRNA metabolic p
mitochondrial gene expr
mitochondrial tran
endoplasmic reticulum mannose tri
protein demannos
protein alpha−1,2−demannos
protein deglycos
tissue remodeling
xtracellular matrix organization
acellular structure organization
sulating structure organization
iratory electron transport chain
electron transport chain
esis coupled electron transport
esis coupled electron transport
erobic electron transport chain
oxidative phosphorylation
