GO:BP Enrichment — Shared and Species−Specific DEGs
Wnt signaling pathway
aerobic respiration
amino acid transmembrane transport
blood circulation
blood vessel development
calcium ion transport
cardiac muscle contraction
cellular respiration
chromosome organization
chromosome segregation
cilium movement
circulatory system process
embryonic morphogenesis
energy derivation by oxidation of organic compounds
external encapsulating structure organization
extracellular matrix organization
extracellular structure organization
heart morphogenesis
import across plasma membrane
mitotic nuclear division
muscle system process
nuclear division
organelle fission
organic anion transport
pattern specification process
proton motive force−driven ATP synthesis
regionalization
regulation of monoatomic cation transmembrane transport
regulation of monoatomic ion transport
regulation of system process
regulation of transmembrane transport
respiratory electron transport chain
response to wounding
synapse organization
