Human_higher
GO Biological Process
glycoprotein metabolic process
glycoprotein biosynthetic process
protein O−linked glycosylation
lipid translocation
homophilic cell−cell adhesion
monoatomic anion transport
glycolipid metabolic process
liposaccharide metabolic process
axon guidance
proteoglycan biosynthetic process
regulation of syncytium formation by plasma membrane fusion
negative regulation of syncytium formation by plasma membrane fusion
regulation of myoblast fusion
negative regulation of myoblast fusion
cytoplasmic translation
syncytium formation by plasma membrane fusion
myoblast fusion
syncytium formation
cell−cell fusion
ribosomal small subunit biogenesis
double−strand break repair
DNA recombination
recombinational repair
cilium organization
regulation of DNA metabolic process
cilium assembly
double−strand break repair via homologous recombination
intraciliary transport
microtubule−based transport
chromosome organization
ATP synthesis coupled electron transport
mitochondrial ATP synthesis coupled electron transport
aerobic electron transport chain
oxidative phosphorylation
respiratory electron transport chain
electron transport chain
cellular respiration
aerobic respiration
generation of precursor metabolites and energy
energy derivation by oxidation of organic compounds
