

pattern specification process	ribonucleoprotein complex biogenesis	pattern specification process
regionalization	ribosome biogenesis	regionalization
embryonic morphogenesis	cell projection morphogenesis	embryonic morphogenesis
animal organ morphogenesis	plasma membrane bounded cell projection morphogenesis	animal organ morphogenesis
posterior pattern specification	neuron projection morphogenesis	anterior/posterior pattern specification
heart development	regulation of membrane potential	tissue morphogenesis
cell projection morphogenesis	axon development	gas exchange
cell projection morphogenesis	regulation of postsynaptic membrane potential	cilium organogenesis
axon projection morphogenesis	modulation of chemical synaptic transmission	determination of left/right symmetry
circulatory system process	regulation of trans-synaptic signaling	heart development
Wnt signaling pathway	circulatory system process	circulatory system process
diencephalon development	axonogenesis	muscle structure development
muscle structure development	ribosomal small subunit biogenesis	cardiac muscle tissue development
cardiac muscle tissue development	cytoplasmic translation	heart morphogenesis
heart morphogenesis	purine-containing compound metabolic process	muscle tissue development
muscle tissue development	rRNA metabolic process	striated muscle tissue development
muscle system process	rRNA processing	cardiac chamber morphogenesis
blood circulation	maturation of SSU-rRNA	blood vessel development
regulation of system process	purine nucleotide metabolic process	muscle system process
heart process	purine ribonucleotide metabolic process	regulation of system process
heart contraction	chromosome organization	heart contraction
cardiac muscle contraction	chromosome segregation	heart contraction
regulation of muscle system process	nuclear chromosome segregation	cardiac muscle contraction
muscle cell development	nuclear division	muscle cell development
striated muscle cell development	organelle fission	muscle cell development
chromosome segregation	DNA replication	regulation of heart contraction
nuclear division	mitotic nuclear division	regulation of muscle system process
organelle fission	DNA recombination	muscle cell development
extracellular matrix organization	sister chromatid segregation	striated muscle cell development
cellular structure organization	mitotic sister chromatid segregation	intracellular chemical homeostasis
regulating structure organization	negative regulation of myoblast fusion	intracellular monoatomic ion homeostasis
monoatomic ion homeostasis	negative regulation of syncytium formation by plasma membrane fusion	intracellular monoatomic cation homeostasis
by plasma membrane fusion	regulation of syncytium formation by plasma membrane fusion	sphingolipid metabolic process
syncytium formation	regulation of myoblast fusion	monoatomic cation homeostasis
positive regulation of endocytosis	myoblast fusion	monoatomic ion homeostasis
epithelial cell differentiation	syncytium formation by plasma membrane fusion	endomembrane system organization
plasminogen activation	syncytium formation	cell adhesion mediated by integrin
mesenchymal-type cell migration	cell-cell fusion	protein maturation
	myotube differentiation	proton transmembrane transport
extracellular matrix organization	ribonucleoprotein complex biogenesis	extracellular matrix organization
	ribosome biogenesis	
	2'-deoxyribonucleotide metabolic process	
cellular structure organization	deoxyribonucleotide metabolic process	extracellular structure organization
	pyrimidine nucleotide metabolic process	
	mitochondrial gene expression	
regulating structure organization	pyrimidine deoxyribonucleotide metabolic process	external encapsulating structure organization
	pyrimidine-containing compound metabolic process	
collagen fibril organization	mitochondrial translation	collagen fibril organization
	ribosomal large subunit biogenesis
