vitamin B6 catabolic process
vacuole fusion, non−autophagic
tRNA processing
tRNA methylation
tRNA metabolic process
translation
substantia nigra development
smoothened signaling pathway involved in regulation of secondary heart field cardioblast proliferation
RNA splicing, via transesterification reactions with bulged adenosine as nucleophile
RNA splicing, via transesterification reactions
RNA splicing
RNA processing
response to pyrethroid
response to molecule of bacterial origin
response to lipopolysaccharide
release of cytochrome c from mitochondria
regulation of transcription initiation by RNA polymerase II
regulation of release of cytochrome c from mitochondria
regulation of mitochondrion organization
regulation of mediator complex assembly
regulation of macroautophagy
regulation of interleukin−21 production
regulation of cristae formation
regulation of collateral sprouting of intact axon in response to injury
pyroptosome complex assembly
pyridoxal phosphate catabolic process
protein transport out of membrane raft
protein localization to somatodendritic compartment
protein homooligomerization
protein biosynthetic process
protein−containing complex organization
protein−containing complex assembly
prechordal plate formation
positive regulation of vascular associated smooth muscle contraction
positive regulation of mitochondrial calcium ion concentration
positive regulation of mediator complex assembly
positive regulation of interleukin−21 production
positive regulation of estradiol secretion
positive regulation of DNA−templated DNA replication initiation
positive regulation of cristae formation
photoperiodism
optic vesicle morphogenesis
optic cup structural organization
neural nucleus development
negative regulation of transforming growth factor beta3 production
negative regulation of RNA splicing
negative regulation of mRNA splicing, via spliceosome
negative regulation of mRNA processing
negative regulation of intracellular steroid hormone receptor signaling pathway
negative regulation of dopamine biosynthetic process
negative regulation of DNA strand resection involved in replication fork processing
negative regulation of corticosterone secretion
negative regulation of collateral sprouting of intact axon in response to injury
negative regulation of cell size
negative regulation of cell growth
mRNA splicing, via spliceosome
mRNA processing
morphogenesis of an endothelium
mitotic DNA−templated DNA replication
mitotic cleavage furrow formation
mitochondrial tricarboxylic acid transmembrane transport
mitochondrial gene expression
mitochondrial citrate transmembrane transport
mitochondrial calcium ion transmembrane transport
mitochondrial calcium ion homeostasis
midbrain−hindbrain boundary initiation
methylation
mediator complex assembly
mannose to fructose−6−phosphate catabolic process
mannose metabolic process
mannose catabolic process
malonate catabolic process
macromolecule methylation
L−phenylalanine metabolic process
L−phenylalanine catabolic process
isopentenyl diphosphate metabolic process
isopentenyl diphosphate biosynthetic process, mevalonate pathway
isopentenyl diphosphate biosynthetic process
IRES−dependent translational initiation of linear mRNA
interleukin−21 production
homogentisate catabolic process
GDP−mannose metabolic process
fibroblast apoptotic process
FAD metabolic process
FAD biosynthetic process
exon−exon junction complex disassembly
entrainment of circadian clock by photoperiod
entrainment of circadian clock
endothelial tube morphogenesis
dUTP metabolic process
dUTP catabolic process
DNA synthesis involved in mitotic DNA replication
dihydrobiopterin metabolic process
deoxyribonucleoside monophosphate biosynthetic process
collateral sprouting of intact axon in response to injury
chemokine receptor transport within lipid bilayer
chemokine receptor transport out of membrane raft
cellular response to muramyl dipeptide
cellular response to molecule of bacterial origin
cellular response to lipopolysaccharide
cap−independent translational initiation of linear mRNA
calcium import into the mitochondrion
behavioral response to starvation
B cell receptor transport within lipid bilayer
B cell receptor transport into membrane raft
B cell negative selection
axon arborization
autophagosome maturation
apoptotic mitochondrial changes
angiotensin−mediated vasoconstriction involved in regulation of systemic arterial blood pressure
