GO Term
water−soluble vitamin biosynthetic process
wound healing
ventricular compact myocardium morphogenesis
ubiquitin−dependent protein catabolic process via the multivesicular body sorting pathway
type B pancreatic cell development
TRIF−dependent toll−like receptor signaling pathway
transcription from RNA polymerase II promoter
thiamine biosynthetic process
thiamine metabolic process
T cell differentiation
sulfur amino acid metabolic process
smoothened signaling pathway involved in spinal cord motor neuron cell fate specification
signal transduction involved in cell cycle checkpoint
ribonucleoprotein complex biogenesis
response to injury involved in regulation of multicellular organism growth
release of cytochrome c from mitochondria
regulation of ventricular cardiac muscle cell membrane repolarization
regulation of transcription from RNA polymerase II promoter in response to stress
regulation of platelet−derived growth factor receptor−beta signaling pathway
regulation of oxidative stress−induced cell death
regulation of mitochondrial membrane potential
regulation of intrinsic apoptotic signaling pathway by p53 class mediator
regulation of hydrogen peroxide−induced cell death
regulation of granulocyte macrophage colony−stimulating factor production
regulation of double−strand break repair via nonhomologous end joining
regulation of cytokine production involved in inflammatory response
regulation of CD4−positive, alpha−beta T cell activation
Purkinje myocyte differentiation
protein transport to vacuole involved in ubiquitin−dependent protein catabolic process via the multivesicular body sorting pathway
protein localization to endosome
promonocyte differentiation
production of molecular mediator of immune response
positive regulation of transcription from RNA polymerase II promoter in response to stress
positive regulation of intrinsic apoptotic signaling pathway by p53 class mediator
positive regulation of granulocyte macrophage colony−stimulating factor production
positive regulation of double−strand break repair via nonhomologous end joining
positive regulation of CD4−positive, alpha−beta T cell activation
phospholipase C−inhibiting G−protein coupled receptor signaling pathway
pattern recognition receptor signaling pathway
nucleotide−binding oligomerization domain containing signaling pathway
neuron intrinsic apoptotic signaling pathway
negative regulation of transcription from RNA polymerase II promoter in response to stress
negative regulation of oxidative stress−induced cell death
negative regulation of mitochondrial membrane potential
negative regulation of intrinsic apoptotic signaling pathway by p53 class mediator
negative regulation of hydrogen peroxide−induced cell death
negative regulation of double−strand break repair via nonhomologous end joining
negative regulation of adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfamily domains
myotube cell development involved in skeletal muscle contraction
myeloid dendritic cell antigen processing and presentation
multicellular organism growth
mitochondrial membrane organization
metanephric cap mesenchymal cell proliferation involved in nephron morphogenesis
mesenchymal cell proliferation involved in ureter development
membrane raft assembly
late endosome to vacuole transport via multivesicular body sorting pathway
L−glutamine metabolic process
intrinsic apoptotic signaling pathway by p53 class mediator
insulin secretion involved in cellular response to glucose stimulus
innate immune response−activating signal transduction
immune response−activating signal transduction
host−mediated activation of viral transcription
hexose biosynthetic process
granulocyte macrophage colony−stimulating factor production
glycolytic process through glucose−6−phosphate
glycine betaine metabolic process
galactose catabolic process via UDP−galactose
folic acid−containing compound biosynthetic process
exonucleolytic trimming to generate mature 3'−end of 5.8S rRNA from tricistronic rRNA transcript (SEN1−dependent)
energy derivation by oxidation of organic compounds
double−strand break repair via nonhomologous end joining
detection of chemical stimulus involved in sensory perception of bitter taste
dendritic cell antigen processing and presentation
cytokine production involved in inflammatory response
cotranslational protein targeting to membrane
cellular response to interferon−gamma
cellular response to cytokine stimulus
cell surface receptor signaling pathway involved in cell−cell signaling
CD4−positive, alpha−beta T cell activation involved in immune response
cardiac muscle cell membrane repolarization
biological process involved in interaction with host
B cell activation
antigen processing and presentation of endogenous peptide antigen via MHC class I via ER pathway, TAP−dependent
antigen processing and presentation of endogenous peptide antigen
amniotic stem cell differentiation
alpha−linolenic acid metabolic process
3'−phosphoadenosine 5'−phosphosulfate metabolic process
10−formyltetrahydrofolate catabolic process
clust0_HigherC
