vasculature development
transcription by RNA polymerase II
taxis
system development
signaling
RNA metabolic process
RNA biosynthetic process
response to wounding
response to interleukin−12
regulation of RNA metabolic process
regulation of primary metabolic process
regulation of nucleobase−containing compound metabolic process
regulation of multicellular organismal process
regulation of leukocyte migration
proteoglycan metabolic process
proteoglycan biosynthetic process
primary metabolic process
positive regulation of phosphorus metabolic process
positive regulation of phosphate metabolic process
positive regulation of nervous system development
positive regulation of locomotion
positive regulation of cell motility
peptide antigen assembly with MHC protein complex
peptide antigen assembly with MHC class II protein complex
nucleobase−containing compound metabolic process
nucleobase−containing compound biosynthetic process
nucleic acid metabolic process
nucleic acid biosynthetic process
negative regulation of phagocytosis
multicellular organismal process
multicellular organism development
MHC protein complex assembly
MHC class II protein complex assembly
macromolecule metabolic process
locomotion
homophilic cell−cell adhesion
G protein−coupled receptor signaling pathway
DNA−templated transcription
developmental process
cytoplasmic translation
chromosome organization
chemotaxis
cellular response to interleukin−12
cell motility
cell migration
cell communication
cell adhesion
cell−cell adhesion
antigen processing and presentation of peptide antigen via MHC class II
antigen processing and presentation of peptide antigen
antigen processing and presentation of exogenous peptide antigen
antigen processing and presentation of exogenous antigen
antigen processing and presentation of endogenous peptide antigen
antigen processing and presentation
anatomical structure morphogenesis
anatomical structure development
