GO Term
vesicle targeting, rough ER to cis-Golgi
transport across blood-brain barrier
tetrahydrobiopterin biosynthetic process
telomere maintenance via telomere lengthening
taurine biosynthetic process
T-helper 1 cell lineage commitment
synaptic vesicle endocytosis
spliceosome conformational change to release U2
somite rostral/caudal axis specification
sodium ion export across plasma membrane
short-chain fatty acid metabolic process
sensory perception of sound
rRNA pseudouridine synthesis
RNA polymerase II promoter activation
retrograde neuronal dense core vesicle transport
response to environmental enrichment
regulation of telomere maintenance via telomerase
regulation of synapse assembly
regulation of respiratory gaseous exchange
regulation of plasma membrane bounded cell projection
regulation of nitric oxide-cGMP mediated signal
regulation of neuron differentiation
regulation of epithelial cell proliferation
regulation of cell proliferation involved in kidney
regulation of cadmium ion import
regulation of amyloid precursor
pyrimidine-containing compound
pyridoxal phosphate
pteridine-containing compound
protein localization to
protein localization
propionate metabolic
potassium ion import
positive regulation of synaptic assembly
positive regulation of plasma
positive regulation of nitric
positive regulation of ATF6
phospholipase C-activating G protein-coupled glutamate
nucleotide-excision repair involved in
nucleobase-containing
neuronal-glial interaction involved in hindbrain
neuromuscular junction
negative regulation of
negative regulation of epithelial cell proliferation
mRNA export from
monoatomic anion
mitotic
microtubule nucleation
microglial cell activation
magnesium ion transport from cytosol
long-term synaptic
L-histidine import
intracellular
helper T cell enhancement of
gamma-aminobutyric
G protein-coupled glutamate
formation of
establishment or maintenance of
epithelial cell
epiboly involved
enzyme-directed
detection of mechanical stimulus
dense core
co-transcriptional lncRNA 3' end processing, cleavage
cilium assembly
chloride transport
cellular
cell communication by electrical
carboxylic acid
axonal transport of messenger
attachment of spindle microtubules to
amyloid precursor protein
amino
acetylcholine
2-oxobutyrate catabolic process
