tRNA processing
tRNA metabolic process
telomere maintenance via recombination
snRNA transport
snRNA import into nucleus
response to glucoside
regulation of lncRNA transcription
regulation of DNA damage checkpoint
regulation of complement activation, alternative pathway
pyruvate biosynthetic process
protein kinase C deactivation
positive regulation of pre−miRNA processing
positive regulation of cytochrome−c oxidase activity
negative regulation of lncRNA transcription
negative regulation of gastric acid secretion
negative regulation of complement activation, alternative pathway
mitotic recombination−dependent replication fork processing
mitotic recombination
mitotic DNA replication maintenance of fidelity
meiotic DNA recombinase assembly
mating
lncRNA catabolic process
glucose 6−phosphate metabolic process
female meiosis sister chromatid cohesion
epigenetic programing of male pronucleus
double−strand break repair via synthesis−dependent strand annealing
DNA repair complex assembly
DNA recombinase assembly
D−serine metabolic process
D−serine biosynthetic process
D−ribose catabolic process
D−amino acid metabolic process
D−amino acid biosynthetic process
cellular response to gamma radiation
cell cycle DNA replication maintenance of fidelity
cell−matrix adhesion involved in ameboidal cell migration
